V. IMPLEMENTATION PLAN ..................................................................................................... 35
Introduction

For over 75 years, Henry Ford College (HFC) has been a leader in providing innovative education focused on student success. Located in Dearborn, Michigan, the school was originally named Fordson Junior College when it opened its doors in 1938. Later, the College adopted the name Dearborn Junior College in 1946. It became Henry Ford Community College in 1952, named after the Henry Ford Trade School which closed and whose assets were transferred to the Dearborn Public Schools Board of Education. In May 2014, the College was renamed Henry Ford College.

Henry Ford College is a comprehensive college providing both two and four year degrees. Educational opportunities for students include over 100 career and university transfer programs, pre-professional studies, associate’s in science, associate’s in applied science, and associate’s in arts degrees, associate’s in general studies, bachelor’s in culinary arts, as well as certificates. The College website contains a complete listing of the over 100 academic programs offered. During the 2020-2021 academic year, HFC served over 16,500 students (unduplicated headcount), which is equivalent to 8,400 full-time students. The average age of HFC students is 25 and 35% attend full time.

Since its founding in 1938, HFC has been the gateway to higher education for thousands of students seeking affordable, high-quality post-secondary education. HFC is a comprehensive public college serving about 13,000 students each fall and winter semester in southeast Michigan. HFC is dedicated to preparing students for a rapidly changing world and workplace by offering more than 100 associate degree career and university transfer programs.

HFC offers high-quality, innovative programs to meet the educational and training needs of the region. Students prepare to transfer to a university or prepare to go directly to work. HFC also specializes in customized workforce development training for business and industry.

HFC offers classes on two campuses situated in Dearborn. HFC's Main Campus is located on the southwest corner of Ford Road and Evergreen, north of the University of Michigan-Dearborn campus. The East Campus is home to HFC’s Michigan Technical Education Center (M-TEC) and the state-of-the-art Nursing education facility.

On July 1, 2018, Mr. Russell Kavalhuna assumed the presidency of HFC, succeeding Dr. Stan Jensen who served the College since May 2013.
I. MISSION STATEMENT

Mission

Henry Ford College transforms lives and builds better futures by providing outstanding education. As a student-centered, evidence-based college, our success is measured by the success of our students. We empower learners through the development of independent, critical and creative thinking, and we foster diversity, inclusion, understanding, and acceptance to prepare learners to succeed in a global society. We anticipate and respond to the needs of our stakeholders, exceed their expectations and serve the public good.

Vision First Choice... Best Choice...

Values

We have a PASSION for...

- teaching and learning;
- exploring diverse perspectives and ideas;
- creating a student-centered environment;
- transforming lives through continuous learning; and
- excellence in all that we do.

We demonstrate INTEGRITY through...

- accountability;
- responsible stewardship;
- ethical conduct;
- honest dialogue; and
- sustainable practices.

We promote INGENUITY by...

- being agile, flexible, and responsive;
- rewarding discovery, creativity, and innovation;
- collecting, evaluating, and acting on evidence;
- thinking critically; and
- continuously reimagining the future.

We show RESPECT for one another when we...

- collaborate and rely on teamwork;
- celebrate diversity and inclusiveness;
- maintain transparent practices;
- show compassion and empathy; and
- are engaged and committed to our shared work.
II. INSTRUCTIONAL PROGRAMMING

A. Describe existing academic programs and projected programming changes during the next five years, in so far as academic programs are affected by specific structural considerations

Programs being re-designed in the next five years include Associate degrees and certificates in energy technology, electrical engineering technology, cybersecurity, machine tool technology/cnc, and automotive technology, and mechatronics. These program improvements require high tech classrooms and laboratories that are supported by a robust technological infrastructure.

Henry Ford College Innovation Institute/ Technology Building Renovation and Addition

Project Purpose:

At a recent task force meeting for Dearborn, Michigan’s Chamber of Commerce, Ford Motor Company shared that driverless, electric, and fully connected autonomous vehicles (CAVs) would replace the city’s downtown rapid transit, busses and taxis by the year 2023. Not since the first Model T cars rolled off Henry Ford’s original assembly line has America witnessed the magnitude of such a transformation in human mobility. The advent of CAVs and the “smart cities” that will evolve around them will irrevocably change the ways America lives, works, and plays. Just as in Henry Ford’s day, we find ourselves today at the quintessential intersection of rapidly emerging technologies and the innovative spirit of entrepreneurship. Science and business have become inseparable partners in “Imagineering” a future world marked by revolutions in manufacturing and industry as well as in the training of the highly skilled workforce necessary to continue to make “made in America” even possible.

Henry Ford College (HFC) is uniquely positioned to prepare today’s students to become tomorrow’s leaders in this ever-evolving technological arena, especially since the installation of cutting-edge industry-standard equipment made possible through the Community College Skilled Trades Equipment Program (CCSTEP). However, HFC’s Technology Building is now over 50 years old. Significant renovation and expansion of the facility are urgently required to support the college’s innovative programming and career training, bringing technology and entrepreneurial skills together in meaningful ways that address the changing needs of business and industry in Southeast Michigan.

The building, programming, maintenance, deployment, and business surrounding the development of CAVs will require the interdisciplinary collaboration of automotive technology, electrical engineering technology, energy technology and storage, chemistry, cybersecurity, software engineering, and entrepreneurial studies. Henry Ford College has been a leader in providing high quality educational and training opportunities in all of these fields. But, as HFC knows from its close working relationships with the Ford Motor Company, General Motors, Stellantis (Fiat Chrysler), and many other partners in the manufacturing industry, the jobs of the future will require workers to acquire and master skills that blend, intersect, combine, and juxtapose knowledge and capabilities in any number of these areas. The integration and convergence of these skills require a radical rethinking of teaching and learning within, across and between these disciplines. Such innovations in curriculum and pedagogy, in turn, require the creation of new open, flexible and interactive learning spaces that facilitate
collaboration and support both project- and competency-based education.

This project will transform HFC’s Technology Building, enabling the college to meet the following objectives:

- Preparing students for successful careers in emerging technologies and skilled trades, especially those related to the industry and business of advanced manufacturing and the automotive field
- Providing talented workers to address the enormous and growing gap between high-tech jobs and the lack of qualified employees to fill them
- Meeting the needs of regional business and industry partners with regard to the “skills gap” between the skills current workers possess and those sought by potential employers
- Facilitating collaboration and interaction between various career, technical education, and business programs to enhance student learning and employability
- Developing and implementing cutting-edge pedagogy by advancing interdisciplinary, project- and competency-based learning
- Creating a “Maker Space” in which students, faculty, industry partners, and entrepreneurs can envision, design, build and test new ideas through hands-on, active-learning experiences
- Housing HFC’s Advanced Manufacturing Early College, creating an effective learning environment for qualified high school students who, in turn, constitute an ongoing pipeline of future skilled talent
- Ensuring that HFC’s Technology Building will be able to continue to support programming needs and student success for the next 50 years.

**Scope of the project:**

This project includes renovation of 18,000 square feet of the HFC Technology Building to improve and reconfigure existing laboratories, including spaces not significantly updated in over 50 years. Renovation will also address deferred maintenance on building systems operating well beyond their useful life, including structure, envelope, HVAC, lighting, electrical and plumbing. This project will allow for continued renovations initiated in 2015 as part of the State of Michigan Community College Skilled Trades Equipment Grant (CCSTEP).

Proposed new construction totaling 24,000 square feet will create multidisciplinary labs, renovated automotive labs, the business and entrepreneurial collaboration space needed to support changing programs and curricula, the curriculum required to upgrade alternative energy generation, the regional demand for workforce training, as well as business and industry partnership initiatives. New construction will also improve building and program access and internal circulation, while addressing the lack of breakout/collaborative workspaces critical for student success.

Several of the programs and physical spaces that will be positively impacted by this project include:

1. **Transportation and Automotive Technology.** Working in partnership with the Ford Motor Company Service Division, the Ford ASSET program for training Ford Dealer technicians began at HFC in 1989-90 and is now provided in schools across the country through the Ford Motor Company. In 2016, the department expanded its Dynamometer labs through the State Matching Equipment Grant to offer Dyno Technician certification in partnership with regional R&D
Automotive Engineering firms. This project will provide additional vehicular lab space to continue support of this growing industry-driven program, especially through the emergence of connected autonomous vehicles (CAVs). The programs in Automotive Technology have been the cornerstone of competency-based educational practice at HFC since the early 1960s. The College has also purchased an additional Dynometer to meet the demands of the program.

2. **HFC Fabrication Lab:** The new Building Science Program and Construction Lab and will join Interior Design, Civil Engineering Technology, and Architecture and Construction in one contiguous SuperLab space. This layout replicates many Design and Construction companies throughout Southeast Michigan, which allows students in programs such as Renewable Energy, Integrated Energy Management training, and Energy Production to work and study as they do in industry.

3. **Product Development Center (“Maker Space”):** Originally designed for communities as prototyping centers for local entrepreneurship, “Maker Spaces” (also known as “Fab Labs”) are increasingly being adopted by schools as centers for project-based, hands-on STEM related education, and by entrepreneurs to explore new business products. Students learn by solving problems through design, the creation of objects and products, and the testing of these ideas by addressing real world problems. A new HFC “Maker Space” will comprise industrial grade design, fabrication, and digital tools to allow students to develop product and concept models. HFC will supplement the original Fab Lab technology (including 3D printers, laser cutters, and other high-quality modeling tools) with larger-scale production equipment that will allow students to build product components in prototype, and test production constraints through programs including CNC production manufacturing.

4. **Innovation, Entrepreneurship, and Business Skills Center.** This Center will occupy space adjoining multiple HFC Technology Labs. The future Small Business Management & Entrepreneurship Certificate will prepare students who are contemplating starting their own business, or who want to improve a business they currently own. The Center will focus on business development strategies and product refinement and will provide entrepreneurs with sound foundation skills in business success including: accounting and finance, customer service, marketing, management, and Entrepreneurial Networking in the 21st Century. Students will test their ideas and evaluate their success as a process to explore their business concepts with a business systems approach. Future entrepreneurs will need appropriate experience, skills, tools, space, and a sense of potential—all of which are components and targets of the Entrepreneurship and Business Skills Center and Certificate program. An Entrepreneur Acceleration Program will be headquartered within the Business Skills Center, offering programs at local high school career and technical education centers. These learning experiences will prepare students at the high school level to become the next generation of technology entrepreneurs.

5. **HFC Advanced Manufacturing Early College:** The groups of students in the Advanced Manufacturing Dual Enrollment program with Dearborn Public Schools and other schools will require additional space, since the program is only in its fourth year. By year six, student on-site participation will increase to 210 students.

6. **Improved Learning Spaces in the Technology Building:** Renovations include much-needed upgrades to at least nine existing classrooms and instructional labs to improve flexibility and connectivity to new and improved hands-on lab environments.

**Program Focus of Occupants:**

The renovated and expanded center will support over 3,250 students annually, including those in the college’s 18 programs in Industrial Technology, programs in Computer Science and Computer Information Systems, dual-enrolled high school students in the HFC Advanced Manufacturing Early College, HFC Middle College Trade School, Secondary Education students preparing to enter apprenticeships in Skilled Trades Education, Advanced Manufacturing, and CIS programs that are employees from business and industry.
This program will enable technology and occupational education students to enhance their technological program skills as well as develop product and service ideas for business and industry. New course and certificate program learning outcomes will include: competencies of a successful entrepreneur, prototyping and rapid prototyping skills, developing and understanding intellectual property laws and business practices, 21st century business leadership skills, product production analyses, pitching a business to partners, investors and funding, sales and marketing skills, and business sustainability skills.

Technology-rich labs and learning environments will support project and competency-based curricula. In these labs, students develop the middle-level job skills or skills in advanced technology and business essential for the economy. By having access to education through collaborative spaces and open labs, and working on projects defined by industry, students will develop the tools essential for integrating new learning practices to become self-directed learners who are able to achieve their personal and professional goals as well as contribute directly to economic growth and development.
1. How does the project enhance the core academic and/or research mission of the institution?

The core academic mission of Henry Ford College is to provide exceptional occupational and transfer education opportunities to our community. Duly acknowledging the rapid speed at which both the business and industry sectors in Southeast Michigan are changing and evolving, Henry Ford College took bold and innovative steps to realign its entire academic structure. The previous traditional, multi-layered, siloed organization had more than 120 independent programs divided into multiple academic divisions that competed with one another for resources and students. The College regrouped academic programs into inter-related clusters within four new schools, which are designed to facilitate collaboration, promote interdisciplinary cooperation, create synergies, build connections, and provide learning communities that mirror the real world. These four new schools are:

- The School of Science, Technology, Engineering and Math (STEM)
- The School of Business, Entrepreneurship, and Professional Development (BEPD)
- The School of Health and Human Services (HHS)
- The School of Liberal Arts (SoLA)

Due to the growing complexity and higher skill levels industry partners expect of their employees, HFC recognized the need to build bridges between career and technical education with the fundamentals of science and mathematics to best prepare students for jobs in the emerging technologies that continue to redefine our region’s economic landscape. The School of STEM was designed to bring together programs, faculty, and students in the fields of physical sciences, biological sciences, math, and pre-engineering. This creates the dynamic and fertile environment necessary for students and workers to be successful in high-tech jobs. Similarly, the School of Business, Entrepreneurship, and Professional Development provides exciting and practical opportunities to blend computer and information technology, business and economics, culinary arts and hospitality skills into industrial technology courses. It also brings engineering, cybersecurity, and automotive students together to apply their learning on an industry-standard dynamometer. It unites students in HVAC, energy technology, architecture/construction, and environmental science classes around issues such as green building and sustainability. More significantly, the School of BEPD has brought for-credit training in business together with the College’s programming in the workforce and professional development, economic growth and development, corporate college, and pre-apprenticeship. All of this was undertaken to better align the College’s academic offerings with the needs and expectations of business and industry. The realignment advances, reinforces, and supports the College’s new, dynamic approach to integrated learning and career preparation.

The Industrial Technology programs at HFC share a joint mission centered upon providing educational experiences to plan, build, fabricate, and maintain the designed world. We offer instruction through hands-on interactive learning, utilizing the most relevant technologies found in working environments. We aspire to develop the mastery of skills that will supply business and industry with competent professionals for a future-driven technological society.

This project will provide critical elements for enhanced student success and mastery of real-world skills through the development of strategic spaces that fit the industry-driven, hands-on, project-based approach to learning. These Strategic Spaces will help students to:

- Take short, project-intensive courses that assure skills mastery and create the foundation for further skills development and greater topical knowledge.
- Give students real-world projects and problems that immediately transfer and apply to the world of work.
- Utilize industry-defined equipment and other advanced simulation-based learning tools.
• Create the opportunity for students to leverage the skills mastered and certifications achieved toward jobs and the creation of new businesses.
• Develop student confidence and technological areas of expertise that will be recognized by business and industry.

The Integrated Manufacturing Systems Troubleshooting Lab is an excellent example of these concepts in action. Students in the Mechatronics associate in applied science degree program work on a complex sequential manufacturing system developed by collaboration with General Motors, Toyota, Ford Motor Company, BMW, and Nissan Motors. It is known as the AMTEC Integrated Manufacturing System (AIMS), and it requires the College lab to have 480V power to run the equipment, as in a typical manufacturing plant. This system replicates the core elements of sequence-based automated manufacturing. Students are given more complex problems or “faults progressively” as projects from their first course to their final course in the program. Learning how to troubleshoot systems is universally identified by manufacturers as the primary goal for maintenance employees. With this lab tool and curricula, students can troubleshoot and repair more than 80% of the common faults that stop manufacturing systems. Employers give universal praise to this instructional innovation, and they ask us to identify more students for their businesses.

Bringing New Product Development and Technology Skill Development Under One Roof

In looking at the rapid rate of new product development and business start-ups today, it is evident that there are abundant opportunities and synergies when technology and entrepreneurship intersect. Public educational institutions must accelerate these successful start-ups and create greater access to business development skills for broader segments of our communities.

Higher education is becoming an incubator and accelerator for transferring knowledge and technology among people and organizations. This educational service is known as Transfer of Technology (TOT). Initiatives such as Ann Arbor Spark, Automation Alley, Bizdom, Build Institute, Detroit Creative Corridor (Creative Ventures Program), Green Garage, Oakland University/OU-Inc, TechArb (Ann Arbor/U of M), Tech Brewery, and TechTown are examples of higher-education, business, and industry technology transfer. This project expands TOT capabilities to institutions of applied learning like HFC and other community colleges that may be able to replicate the model.

Schools with the ability to support TOT and business start-ups encourage the creation of new product ideas, business analysis and start-up skills, and refinement of the personal vision of student entrepreneurs. As students achieve certifications in IT, CAD, HVAC, Advanced Manufacturing, Industrial Sewing, Electrical Engineering Technology, or Automotive programs, their potential to envision a future for their own business can emerge.

A few examples of the new products and businesses envisioned by students already include:

• modularized bicycle manufacturing developed in the fabrication capstone projects of the Welding program;
• Internet of Things (IoT) system of interrelated computing devices, mechanical and digital machines, objects, animals, or people that are provided with unique identifiers (UIDs) enabling the transfer data over a network without requiring human-to-human or human-to-computer interaction;
• Automotive and HVAC technicians as start-up service businesses;
• 3-D product designs for automotive applications in the Design and CAD program.

This project generates an “Applied Entrepreneur’s” library of skillsets and templates based on real
business tools developed by successful enterprises that “plan, build, fabricate, and maintain the designed world.” These skills become the competencies necessary to envision, implement, and evaluate each student’s products, services, and business ideas. The best ideas can then become practical business start-ups and real-world applications of student learning. These experiences challenge students and accelerate their maturity, which is necessary for successful completion of an occupational associate degree or transfer to another educational institution for completion of a bachelor’s degree.

2. How does the project support investment in or adaptive re-purposing of existing facilities and infrastructure?

This project will continue the renovation and repurposing of the Technology Building as indicated in the 2015 Campus Master Plan, updating it to meet the interdisciplinary needs of college programs. Henry Ford College has significantly invested in this facility and programs as its part of matching the State of Michigan Skilled Trades Equipment Grant. The College committed $1.2 million as a direct match to the grant to address renovation of the Technology Building space to accommodate the $4.5 million of equipment for use in advanced manufacturing, mechatronic, and automotive engine testing programs. The State has recently increased the original equipment grant funds by an additional $480,000 which will increase the equipment purchase to $5 million. To date, the local direct match for the equipment project is over $1.8 million. In addition to the direct expense match for the grant, an additional $1.1 million of indirect cost expenditures were committed to the grant which results in a commitment by Henry Ford College of $2.9 million in this building and its programs.

The College also recently spent over $480,000 to renovate the welding lab. The renovation includes space/station upgrades, new exhaust and air handling capabilities, and space upgrades to conduct demonstration areas as well as areas for hands-on instruction and training. Major welding equipment was also replaced with 18 multi-purpose welding booths and the development of welding fabrication work areas. The project-based learning strategies, expected to be more materials intensive, have turned out to significantly reduce scrap generation and therefore materials consumption by 15%. This is due to the increase in student awareness of their project work and therefore material use.

Many of the labs and classrooms in the existing Technology Building, whether in the original 1965 wing or the 1996 addition, were designed for a single use, a single skill, curriculum that is now outdated, and technologies that have changed dramatically over the last 50 years.

- Classroom renovations will create learning environments that meet the needs of a 21st century curriculum, with updated, technology and better integration with adjacent lab spaces.
- To support the goals of the Henry Ford College Entrepreneur and Innovation Institute/Technology Building Renovation and Addition, renovations to existing offices and construction of a center for entrepreneurial support and development will transform outdated offices into a collaborative hub to better connect students, faculty and employers.
- The new Automotive Lab will connect to the existing, undersized high-bay automotive service lab, and engine testing areas. This will significantly improve the usability of the existing automotive lab and provide students in the industry-driven growing programs improved access to recently updated equipment and tool resources. The connected spaces will better simulate the students’ future working environments and meet the training needs of the region’s automotive dealerships and automotive Research and Design firms.
- The new Fabrication Lab will connect the existing welding/materials lab, machine tool/CNC manufacturing lab and CAD and Design Studios, transforming these individual spaces into an integrated center for product development, fabrication and manufacturing. Adjacent classrooms and breakout spaces will provide space for mentorship and quick problem solving.

The 2020 Facility Condition Assessment determined the Technology Building has a current
replacement value of approximately $50,599,000 and a 5-year projected deferred maintenance backlog of over $7,667,000, the majority related to HVAC, electrical and lighting. To reduce maintenance costs, this project will address a portion of the HVAC, electrical, lighting, hardware and finishes identified as due for upgrade or replacement. While many of these systems are at the end of their expected life, the building infrastructure is capable of supporting the improvements with minimal challenge.

**Energy Learning Center**

**Project Purpose**

Major transformations are underway in the way energy is being used, distributed, and sourced in the USA and globally. A combination of factors drives these changes. There are worldwide efforts to reduce carbon emissions from energy use to limit the effects of climate change. Energy and water systems in Michigan and beyond are being upgraded to improve flexibility and reliability and reduce environmental damage. Technological advances are enabling cleaner, cheaper, and more efficient energy and water use, distribution, and supply choices. Information technology is facilitating the continuous optimization of energy performance from supply to end-use. The result is growing and significant changes to the shape of energy systems in communities, neighborhoods, and industry. They are becoming more deeply integrated along with accelerated localization of clean and renewable energy supplies, including the productive use of energy currently being wasted.

Leadership in industry, commerce, significant institutions, communities, and various levels of government increasingly understand the opportunities and risks associated with energy use. The need to develop complete energy solutions that deliver breakthrough levels of efficiency, reliability, flexibility and environmental performance at lower day-to-day costs and overall economic risk is growing. The result is an increasing demand for new skills in tomorrow’s workforce at all levels, a need that Henry Ford College aims to be uniquely positioned to serve.

Against this backdrop, the leadership of Henry Ford College developed an Integrated Energy Master Plan (IEMP) that represents global best practices in both its energy education and its energy performance in terms of energy efficiency, water efficiency, energy reliability, and reduced greenhouse gas emission, while achieving acceptable investment returns. These operating results will be achieved by substantial investments in control and metering, efficiency, restructured energy supply and distribution, and enhanced energy management. This will create a world-class “Living Classroom” upon which the College will extend its academic offering.

The Energy Learning Center will be incorporated in the Tech Building. The Center will be both configured as a teaching facility and be a modern operational facility. It will be designed as a visible statement of the College’s energy leadership. The Center will manage and supply competitive, clean, and reliable energy from a portfolio of efficient sources. These include high-efficiency boilers and chillers, thermal storage, combined heat and power generation, along with significant solar power generation.

The College’s energy solution combines the latest, proven technologies into a world-class flexible configuration that can evolve with ongoing changes over the coming decades. It will be a complete example of energy and carbon-efficient Smart Community on a small-scale.

The Energy Learning Center and the other elements of the campus as an “Energy Living Classrooms” will enable the College to offer services and education to meet the following objectives:
Preparing students for careers in management and skilled trades associated with the planning, design, implementation, and operation of world-class integrated energy solutions.

Providing talented workers to address the growing gap between the need of communities, industry, and other leaders to drive breakthrough improvements in energy performance and the lack of suitably qualified employees.

Providing talented workers to fill the gap between the needs of local and global industry partners concerning the knowledge and skills gap of current workers and the growing market for integrated energy solutions.

Providing early engagement and outreach to elementary and high-school students in Dearborn, greater Detroit, and Windsor to raise awareness and open-up energy-related career choices.

Creating a “Reference Destination” for US and Canadian civic and industrial leaders, policymakers, trade associations, environmental groups, and other key influencers to experience a world-class neighborhood energy solution.

Creating a flexible technology platform that can evolve as new technical and operating approaches are developed

Providing the basis for collaboration with selected non-US colleges to ensure a global best-practice perspective is nurtured and maintained.

Creating a pervasive energy productivity culture whereby all staff, faculty, and students have a greater understanding of the importance of proper energy management such that their future personal and business decisions will be influenced.

**Scope of Project:**

The Energy Learning Center (ELC) Project includes the creation of a new energy center on about 7,000 square feet at the southern arc of the Tech Building, created using both repurposed space within the existing building and some external space. This will be designed as an architecturally distinctive, high-visibility campus feature, underlining the transformational approach the College will be taking to energy education. The entire campus energy use and supply will be accessible and controllable from the ELC both for teaching and operational purposes. The ELC will physically include a flexible mix of heating supply components serving the entire campus. These include combined heat and power generation, high-efficiency boilers, and thermal storage. Space will be organized and spaced to facilitate reference visits, teaching, and general engagement. Included in the space will be a dedicated classroom. Throughout the ELC, labeling, graphics, and electronic displays for engagement and teaching will be included.

The Project also includes installing a global-best practice municipal district heating network serving the entire campus using globally recognized (EN) standards for material and installation. This network connects to the ELC and will be used for demonstrating and teaching related to best-practice municipal district energy and be one of few facilities of its kind in the USA or Canada.

Also included in the ELC is the installation of best-practice standardized district energy sub-stations connecting the district heating network to each building. Again, these will be sited such that they are appropriate for demonstration and teaching. They will again be one of the very few examples in North America of the standardized approach used in many other parts of the world.

Strategies to include new district energy networks and local energy supply are increasingly considered in energy and climate plans for North American communities and campuses, in turn creating a
demand for a suitably skilled workforce.

Including aspects that are more common in other parts of the world allows the College to serve the education and training needs of a transforming US and Canadian market, including global players looking to expand their North American activities.

The ELC, including the network and sub-stations, replaces existing inefficient boilers and a 60-year old high-temperature network with customized aging building connections. This will retire significant deferred maintenance and avoid future replacement in a few years.

Not included in the project, but forming part of the overall integrated energy solution managed and taught within the ELC will be the upgrading of the cooling supply and the installation of 500kW of solar photovoltaic generation on rooftops and parking structures.

The IEMP’s academic focus includes realigned workforce training, technical certification, continuing education certificates, and potentially a new bachelor’s degree program. The plan is designed to position the College as the destination for elementary and high-school students in Dearborn, greater Detroit, and Windsor, Ontario, as an innovative resource for raising energy and climate awareness, new career paths, and engaging future College students.

**Program Focus of Occupants**

The ELC will facilitate programs aimed at complementing or upgrading the awareness and skills of a wide range of full-time and part-time students, with the underlying goal to ensure adequate human resources are available to support and accelerate the transformations in the energy market.

**Technical Certification** on crucial elements of the integrated energy system: These would be focused on areas less common in the current US market. These will include:

- Building energy modeling and demand estimation
- Design of DE networks
- Site preparation for installing district energy networks
- Pre-insulated DE pipe welding and inspection
- Installing and commissioning DE sub-stations
- Installation and commissioning of CHP engines
- Multi-utility metering and sub-metering

These programs would serve the employee needs of both local and global industry players looking to expand the US market. The College would finalize the design of these programs in partnership with the relevant industry players.

**Continuing Education:** to enhance the understanding of integrated energy solutions and the approaches needed to evaluate implementation alternatives: These would be eligible for the appropriate professional CEUs but would generally not earn academic credits. Topics would include:

- Integrated Energy Master Planning basic techniques
- Relationship of Energy Master Plans to other municipal/campus plans
- District energy basics
- Optimizing neighborhood energy production and distribution systems
- Neighborhood energy planning for property developers
• Energy Planning for municipal leaders and staff
• Transformational versus incremental energy planning
• Industrial site energy planning
• Community energy planning
• Campus energy planning
• Comparison of global energy practices

These would be focused on students already in roles where new approaches to energy decision making are needed. They would also be appropriate for training sales, marketing, and project managers of industry players entering or operating in this market. They could also be attractive to students in unrelated employment looking to move towards the emerging multi-billion dollar global market resulting from energy transformation and climate change mitigation.

**Bachelor’s degree in Energy Production:** in the context of integrated energy solutions: The IEMP calls for the creation of the College’s first bachelor’s degree focused on Energy Production balanced between local and regional supply, and between thermal and electrical demands. A vital feature of this degree would be its emphasis on teaching global best practices with an active North American context, facilitated by international institutional and faculty team.

**Education and Outreach to K-12 Schools:** in the Dearborn and neighboring communities: These programs would be aimed at increasing the understanding of energy basics, the risks, and opportunities around the use of energy, to attract a new generation to consider some aspect of the transforming energy market as a career choice. The ELC will be the platform for site visits.

**Hosting Meetings:** Aimed at institutions, associations, and corporations with a sustainable energy focus. The ELC will be a significant asset to support the campus as a preferred site for regular and ad hoc meetings. The College will structure a program to host such meetings on a professional basis.

1. **How does the project enhance the core academic and/or research mission of the institution?**

The core academic mission of Henry Ford College is to provide exceptional occupational and transfer education opportunities to our community. Duly acknowledging the rapid speed at which both the business and industry sectors in Southeast Michigan are changing and evolving, Henry Ford College took bold and innovative steps to realign its entire academic structure. for the start of the 2017-2018 school year. The previous traditional, multi-layered, siloed organization had more than 120 independent programs divided into multiple academic divisions that competed with one another for resources and students. The College regrouped academic programs into inter-related clusters within four new schools, which are designed to facilitate collaboration, promote interdisciplinary cooperation, create synergies, build connections, and provide learning communities that mirror the real world. These four new schools are:

• The School of Science, Technology, Engineering and Math (STEM)
• The School of Business, Entrepreneurship and Professional Development (BEPD)
• The School of Health and Human Services (HHS)
• The School of Liberal Arts (SoLA)

Due to the growing complexity and higher skill levels industry partners expect of their employees, HFC recognized the need to build bridges between career and technical education with the fundamentals of science and mathematics to best prepare students for jobs in the emerging technologies that continue to redefine our region’s economic landscape. The School of STEM was designed to bring
together programs, faculty, and students in the fields of physical sciences, biological sciences, math, and pre-engineering. This creates the dynamic and fertile environment necessary for students and workers to be successful in high-tech jobs. Similarly, the School of Business, Entrepreneurship, and Professional Development provides exciting and practical opportunities to blend computer and information technology, business and economics, culinary arts and hospitality skills into industrial technology courses. It also brings engineering, cybersecurity, and automotive students together to apply their learning on an industry-standard dynamometer. It unites students in HVAC, energy technology, architecture/construction, and environmental science classes around issues such as green building and sustainability. More significantly, the School of BEPD has brought for-credit training in business together with the College’s programming in the workforce and professional development, economic growth and development, corporate college, and pre-apprenticeship.

All of this was undertaken to better align the College’s academic offerings with the needs and expectations of business and industry. The realignment advances, reinforces, and supports the College’s new, dynamic approach to integrated learning and career preparation.

The Industrial Technology programs at HFC share a joint mission centered upon providing educational experiences to plan, build, fabricate, and maintain the designed world. We offer instruction through hands-on interactive learning, utilizing the most relevant technologies found in working environments. We aspire to develop the mastery of skills that will supply business and industry with competent professionals for a future-driven technological society.

This project will provide critical elements for enhanced student success and mastery of real-world skills through the development of strategic spaces that fit the industry-driven, hands-on, project-based approach to learning. These Strategic Spaces will help students to:

- Take short, project-intensive courses that assure skills mastery and create the foundation for further skills development and greater topical knowledge.
- Give students real-world projects and problems that immediately transfer and apply to the world of work.
- Utilize industry-defined equipment and other advanced simulation-based learning tools.
- Create the opportunity for students to leverage the skills mastered and certifications achieved toward jobs and the creation of new businesses.
- Develop student confidence and technological areas of expertise that will be recognized by business and industry.

The Integrated Manufacturing Systems Troubleshooting Lab is an excellent example of these concepts in action. Students in the Mechatronics associate in applied science degree program work on a complex sequential manufacturing system developed by collaboration with General Motors, Toyota, Ford Motor Company, BMW, and Nissan Motors. It is known as the AMTEC Integrated Manufacturing System (AIMS), and it requires the College lab to have 480V power to run the equipment, as in a typical manufacturing plant. This system replicates the core elements of sequence-based automated manufacturing environment. Students are given more complex problems or “faults progressively” as projects from their first course to their final course in the program. Learning how to troubleshoot systems is universally identified by manufacturers as the primary goal for maintenance employees. With this lab tool and curricula, students can troubleshoot and repair more than 80% of the common faults that stop manufacturing systems. Employers give universal praise to this instructional innovation, and they ask us to identify more students for their businesses.

2. How does the project support investment in or adaptive re-purposing of existing facilities and
This project will continue the renovation and repurposing of the Technology Building as indicated in the 2015 Campus Master Plan, updating it to meet the interdisciplinary needs of college programs. Henry Ford College has significantly invested in this facility and programs as its part of matching the State of Michigan Skilled Trades Equipment Grant. The College committed $1.2 million as a direct match to the grant to address renovation of the Technology Building space to accommodate the $4.5 million of equipment for use in advanced manufacturing, mechatronic, and automotive engine testing programs. The State has recently increased the original equipment grant funds by an additional $480,000 which will increase the equipment purchase to $5 million. To date, the local direct match for the equipment project is over $1.8 million. In addition to the direct expense match for the grant, an additional $1.1 million of indirect cost expenditures were committed to the grant which results in a commitment by Henry Ford College of $2.9 million in this building and its programs.

The College spent over $480,000 to renovate the welding lab. The renovation includes space/station upgrades, new exhaust and air handling capabilities, and space upgrades to conduct demonstration areas as well as areas for hands-on instruction and training. Major welding equipment was also replaced with 18 multi-purpose welding booths and the development of welding fabrication work areas. The project-based learning strategies, expected to be more materials intensive, have turned out to significantly reduce scrap generation and therefore materials consumption by 15%. This is due to the increase in student awareness of their project work and therefore material use. Many of the labs and classrooms in the existing Technology Building, whether in the original 1965 wing or the 1996 addition, were designed for a single use, a single skill, curriculum that is now outdated, and technologies that have changed dramatically over the last 50 years.

- Classroom renovations will create learning environments that meet the needs of a 21st century curriculum, with updated technology and better integration with adjacent lab spaces.
- To support the goals of the Henry Ford College Entrepreneur and Innovation Institute/Technology Building Renovation and Addition, renovations to existing offices and construction of a center for entrepreneurial support and development will transform outdated offices into a collaborative hub to better connect students, faculty and employers.
- The new Automotive Lab will connect to the existing, undersized high-bay automotive service lab, and engine testing areas. This will significantly improve the usability of the existing automotive lab and provide students in the industry-driven growing programs improved access to recently updated equipment and tool resources. The connected spaces will better simulate the students’ future working environments and meet the training needs of the region’s automotive dealerships and automotive Research and Design firms.
- The new Fabrication Lab will connect the existing welding/materials lab, machine tool/CNC manufacturing lab and CAD and Design Studios, transforming these individual spaces into an integrated center for product development, fabrication and manufacturing. Adjacent classrooms and breakout spaces will provide space for mentorship and quick problem solving.

The 2020 Facility Condition Assessment and a 5-year projected deferred maintenance backlog of over $7,667,000, the majority related to HVAC, electrical and lighting. To reduce maintenance costs, this project will address a portion of the HVAC, electrical, lighting, hardware and finishes identified as due for upgrade or replacement. While many of these systems are at the end of their expected life, the building infrastructure is capable of supporting the improvements with minimal challenge.

B. The unique characteristics of HFC’s academic mission include:
• **Over 100 associate degree programs** and **forty-five certificate programs** in career and technical fields.

• **Seventeen areas of study** and **nineteen associate degree** programs to serve the needs of transfer students.

• **HFC hosts three early college/dual enrollment academies on its Main Campus:** 1) a Health Careers Early College (a collaboration with Dearborn Public Schools and Henry Ford Health Systems); 2) an Advanced Manufacturing Early College (in collaboration with Dearborn Public Schools and Ford Motor Company’s Next Generation Learning initiative); and 3) a Pre-Education program (designed in collaboration with Dearborn Public Schools to address the looming teacher shortage in the Southeast Michigan region). HFC has also recently launched a Trade School providing career and technical training for a consortium of dual-enrolled high school students in an array of professional fields.

• A strong connection to **over thirty local school districts**. Dual enrollment and career exploration opportunities are available to high school students to help prepare them for post-secondary education and the world of work including the Downriver Career Technical Consortium, Advanced Technology Academy, and Detroit Public Schools Community District.

• **Articulation agreements** with Oakland University, Eastern Michigan University, Ferris State University, Madonna University, Siena Heights College, University of Michigan-Ann Arbor, University of Michigan-Dearborn, University of Detroit Mercy, Midwestern University-Chicago, and Wayne State University ensure transfer students experience a seamless transition to these colleges and universities.

• A **University Center** including partnerships with Madonna University, Sienna Heights and development of four additional partners to offer four-year degrees on the HFC campus.

• **Workforce development training** including customized on-site training for many regional organizations such as UAW Ford, Fiat Chrysler Automotive, AK Steel, and Infrasource. Working with a consortium of colleges, HFC assisted with the development of the **MS-AMC performance-based objectives for trade and apprentice education**.

• HFC was awarded a **Department of Labor grant** to develop a new learning paradigm that integrates competency-based learning into training and educational modules to enhance employee training programs for companies and colleges.

• **HFC was in its sixth year in collaboration with the Detroit Scholarship Fund (DSF), putting in place retention and success initiatives that encourage completion among HFC students who are DSF recipients.**

• The **Office of Military and Veterans Services** offers assistance to help veterans as well as active military and their families enroll and succeed at HFC.

• **Assisted Learning Services** provides accommodations to students with disabilities through a number of support services. A Center for Teaching Excellence and Innovation for teacher development.

• HFC’s radio station, **WHFR 89.3**, provides a real-world lab experience in telecommunication for HFCC students, to serve the needs of Dearborn and the
surrounding communities.

- An English Language Institute that offers intensive preparation in English for English Language Learners, allowing them to move directly into college-level academic programs.
- HFC has designed new accelerated and co-requisite pathways to facilitate remediation and successful transition to college-level coursework in English (Writing, Reading) and Mathematics.
- A Center for Teaching Excellence and Innovation for professional development of faculty and the continuous improvement of teaching and learning at HFC.
- Community engagement including plays and concerts, hosting fund-raising activities for scholarships, open lecture and film series, conference and convention facilities, and dining facilities.

C. Identify other initiatives which may impact facilities usage

Stemming from the HFC Strategic Plan, the following objectives will affect facilities usage:

1. Develop new and revise existing programs to meet the expectations of the workforce including flexible, innovative manufacturing education environments.
2. Expand HFC degrees to include a Baccalaureate Degrees as opportunities become available (e.g., Energy Production and Nursing).
3. Obtained a $5 million equipment grant from the State of Michigan which includes a $1.2 million facility renovation investment to accommodate the equipment for program delivery.
4. Create and expand local, regional, national and international partnerships and collaborations with business, governmental, non-profit, and educational institutions to create a global institution.
5. Develop and deliver technology training based on the assessed needs of students, faculty, and staff.
6. Ensure that the College’s physical facilities, equipment, and technological infrastructure support fulfillment of the College’s mission.
7. Promote sustainability and environmentally sound policy in facilities resource planning.

In June 2017, the College initiated a project to develop an Integrated Energy Master Plan (IEMP) which when combined with the College’s Facility Master Plan will provide an integrated approach to renovate facilities that meet “World Class” energy performance standards.

The Integrated Energy Master Plan Scope and Design (IEMP) was completed in March 2018 and is aimed at ensuring the College has world-class energy performance in terms of energy reliability, energy efficiency, greenhouse gas emissions and energy cost. This is a transformative plan aimed at reducing the energy and emissions footprint of the College by at least 60% to bring it in line with the global best practices. The targets for the IEMP were guided by US, Canadian and European benchmark institutions. (Details in Appendix B)

An equally important goal of the IEMP will be to create new academic offerings including new courses, apprenticeships and internships. For this reason, the IEMP is co-sponsored by the VP of Finance & Administration and the VP Academic Affairs. In support of this aspect of the IEMP, the
College Campus will be consciously configured as a “Living Classroom” to serve both the academic and operational aspects of the IEMP. The project has an investment of over $23 million and had a projected payback of 12 years with performance guarantees established in the construction contract.

D. Demonstrate economic development impact of current/future programs

The 2017 study conducted by Economic Modeling Specialists, Intl., Figure 1, provides data strongly supporting the fact that the College has a significant impact in promoting economic development, enhancing students’ careers, and improving quality of life. This study is in the process of being updated for 2019.

Fact Sheet

Demonstrating the Economic Value of Henry Ford College
Henry Ford College (HFC) creates a significant positive impact on the business community and generates a return on investment to its major stakeholder groups—students, taxpayers, and society. Using a two-pronged approach that involves an economic impact analysis and an investment analysis, this study calculates the benefits received by each of these groups. Results of the analysis reflect fiscal year (FY) 2016-17.

### IMPACTS CREATED BY HFC IN FY 2016-17

<table>
<thead>
<tr>
<th>Added Income</th>
<th>Jobs</th>

<tr>
<td><strong>Total Impact</strong></td>
<td><strong>13,191</strong></td>
</tr>
</tbody>
</table>

### IMPACT ON BUSINESS COMMUNITY

During the analysis year, HFC and its students added **$883 million** in income to the HFC Service Area’s economy, approximately equal to **0.4%** of the region’s total gross regional product (GRP). This impact is equivalent to supporting **13,191** jobs. The economic impacts of HFC break down as follows:

#### Operations spending impact
- HFC employed 1,427 full-time and part-time employees in FY 2016-17. Payroll amounted to $62.4 million, much of which was spent in the HFC Service Area to purchase groceries, clothing, and other household goods and services. The college spent another $49.1 million to support its day-to-day operations.
- The net impact of college payroll and expenses in the HFC Service Area during the analysis year was approximately **$102 million** in income.

#### Student spending impact
- Around **2%** of students attending HFC originated from outside the region. Some of these students relocated to the HFC Service Area. In addition, a number of students would have left the region if not for HFC. These relocated and retained students spent money on groceries, transportation, rent, and so on at regional businesses.
- The expenditures of relocated and retained students during the analysis year added approximately **$18.5 million** in income to the HFC Service Area economy.

#### Alumni impact
- Over the years, students have studied at HFC and entered or re-entered the workforce with newly-acquired skills. Today, thousands of these former students are employed in the HFC Service Area.

*The HFC Service Area is comprised of Macomb, Monroe, Oakland, Washtenaw, and Wayne Counties.*

</table>

For every $1 spent by...

**STUDENTS**

$4.20

Gained in lifetime earnings for STUDENTS

**TAXPAYERS**

$8.90

Gained in added taxes and public sector savings for TAXPAYERS

**SOCIETY**

$15.30

Gained in added state revenue and social savings for SOCIETY

- The impact of former students currently employed in the regional workforce amounted to $762.4 million in added income during the analysis year.

RETURN ON INVESTMENT TO STUDENTS, TAXPAYERS, AND SOCIETY

Student perspective

- HFC’s FY 2016-17 students paid a total present value of $34.1 million to cover the cost of tuition, fees, supplies, and interest on student loans. They also forwent $116.2 million in money that they would have earned had they been working instead of learning.

- In return for the monies invested in the college, students will receive a present value of $633.2 million in increased earnings over their working lives. This translates to a return of $4.20 in higher future earnings for every $1 that students invest in their education. The average annual return for students is 15.6%.

Taxpayer perspective

- In FY 2016-17, state and local taxpayers in Michigan paid $41 million to support the operations of HFC. The net present value of the added tax revenue stemming from the students’ higher lifetime earnings and the increased output of businesses amounts to $349.1 million in benefits to taxpayers. Savings to the public sector add another $16 million in benefits due to a reduced demand for government-funded services in Michigan.

- Dividing benefits to taxpayers by the associated costs yields a 8.9 benefit-cost ratio, i.e., every $1 in costs returns $8.90 in benefits. The average annual return on investment for taxpayers is 26.2%.

Social perspective

- The economic base in Michigan will grow by $3.7 billion over the course of the students’ working lives. Society will also benefit from $56.6 million in present value social savings related to reduced crime, lower unemployment, and increased health and well-being across the state.

- For every dollar that society spent on HFC FY 2016-17 educations, society will receive a cumulative value of $15.30 in benefits, for as long as the FY 2016-17 student population at HFC remains active in the state workforce.
III. STAFFING AND ENROLLMENT

A. Describe current full and part-time student enrollment levels by academic program and define how the programs is accessed by the student

In-district enrollments (serving the City of Dearborn and parts of Dearborn Heights) comprise approximately 41% of the unduplicated headcount. Out-of-district enrollments represent approximately 59% of overall enrollment.

The majority of academic programs are accessed through on-campus instruction at the main campus. The nursing program is located at the East Campus. 100% online courses have increased and account for approximately 62% of sections offered (37% asynchronous, 25% live with instructor), hybrid courses account for approximately 15% of offered sections, and on-campus courses account for 23% of sections offered.

Training programs for business and industry are provided either at the worksite or at the M-TEC facility on east campus.

B. Enrollment Patterns over the last five years & projected enrollment pattern for the next five years

Enrollment trends state-wide in community colleges showed increases from 2008 through 2010. HFC had been fortunate to participate in this upward trend and served 18,525 students in the Fall semester of 2010. From the start of the growth period, 2005, through fall of 2010, students increased from 12,521 to 18,525 for an increase of 24%. Since that time, enrollment has declined consistently with the inverse relationship enrollment has with the rebound of the national economy. Table 1 below illustrates Fall HFC enrollment over the period of 2008 – 2020.
HFC is breaking new ground in meeting the needs of students in terms of customer satisfaction as well as degree completion. Agreements with transfer colleges and universities, training and retraining programs, and an emphasis on distance education will be a few of the strategies used to grow and create new programs and services. Programs will be made more accessible by offering more flexible scheduling of classes, including weekend College programs, and by offering more courses and ultimately programs on-line.

Despite the expected decline in enrollment due to the strength of the economy and COVID-19, HFC is making significant efforts to mitigate the decrease by increasing marketing and recruitment efforts, including international and global relationships which will increase enrollment, and revising policies and procedures to enhance the student experience at HFC, including efforts to ensure posted class offerings will be provided. The College forecasts an annual 0.5% increase in enrollment over the next five years.

An emphasis on recruitment and retention efforts will remain strong and environmental scanning efforts will ensure that the College continues to offer programs that meet the needs of students and the community.

The College has expanded its presence in Early College programs to where over 15% of the teaching is done on campus for K-12 students.

**C. Provide instructional staff/student and administrative staff/student ratios for major academic programs**

In the nursing program, the faculty to student ratio is about 1:28 and the administrative staff to student ratio is about 1:103. For the health careers programs, the faculty to student ratio is about 1:15 and the administrative staff to student ratio is about 1:150. In the computer information
systems program, the faculty to student ratio is about 1:20 and the administrative staff to student ratio is about 1:151.

D. Project future staffing needs based on five-year enrollment estimates and future programming

Based on enrollment projections, it is estimated that the total number of adjunct faculty will shrink as the total number of sections declines in certain areas. However, with the addition of new programs, it will be necessary to continue to attract highly qualified full-time faculty in high demand areas including culinary arts, manufacturing, alternative energy and health careers. Retirements in some areas allow for the vacancies to be utilized in areas where students demand has increased.

E. Identify current average class size and projected average class size based on institution’s mission and planned programmatic needs

It is the policy of the College that the minimum class size is fifteen students. The average class size is twenty students. This, of course, varies according to the nature of the program or type of course. For example, it is appropriate that certain types of general education courses seat thirty students per section. However, more difficult courses or technical courses that require particular labs are appropriately run with fewer students. At times, a class of less than fifteen students is offered if a group of students need a course during a particular semester in order to graduate.

No change is projected to this policy or average class size. It is the mission of the community college, in general, and Henry Ford College, in particular, to offer small class sizes. This aspect differentiates the community college from the four year university where a class size of 100 is not unusual. Henry Ford College students are provided more individual attention from faculty and support services.
IV. Facility Assessment

A professionally developed comprehensive facilities assessment is required.

Henry Ford College engaged Stantec, Inc. (formerly SHW) to facilitate the Master Facilities Planning process, which included a facility assessment, utilization plan, and updated master plan. This initiative supports HFC’s mission and strategic plan by ensuring the College provides an outstanding environment in which to deliver high-quality academic programs.
The 2021 HFC Facilities Assessment of over 942,449 square feet and $325,365,000 replacement value has yielded a Facility Condition Index (FCI) of GOOD (0-5%) with respect to Priority 1-3. That is, the total value of projects that will require attention within the next five years including those that require immediate attention in order to maintain facilities and related infrastructure for safe use. The buildings identified as having significant issues include the Technology, Liberal Arts, and Physical Fitness buildings.

Major progress has been made in addressing the maintenance issues of the buildings since 2018. Appendix G identifies some of the specific priority repairs required while Appendix H identifies outstanding priority projects for priority one at $3,784,000 for 2021 while Appendix H identifies priority 1-3 outstanding projects at $15,318,000 at the end of 2021.
The Current Replacement Value (CRV) is the cost to construct a replacement building in today’s dollars, the Deferred Maintenance Backlog (DMB), and the Facility Condition Index (FCI) (DMB/CRV) is shown below for fiscal year 2021-2022:

<table>
<thead>
<tr>
<th>Facility Current Replacement Value (CRV)</th>
<th>Annual Estimate to Maintain (3% of CRV)</th>
</tr>
</thead>

</tbody>
</table>

CLASSROOM UTILIZATION

Detailed information regarding classroom utilization can be found on pages 52-54 of the Master Plan.
1. **Mandated facility standards for specific programs, where applicable (i.e. federal/industry standards for laboratory, animal, or agricultural research facilities, hospitals, use of industrial machinery, etc.)**

   In the science program, laboratories must meet standards set by the Department of Transportation (chemical labeling), OSHA (workplace safety) and the EPA (chemical disposal). Chemicals are handled according to prudent practices for academic chemical laboratories, with emphasis on pertinent local, state, and federal regulations. All faculty go through yearly lab safety training.

   The Science Division has a part-time chemical lab technician who is in charge of chemical inventories and lab safety. Standardized inventory and labeling have been implemented to comply with workplace safety and chemical labeling regulations.

   The technology programs that teach the use of industrial machinery follow OSHA regulations such as those requiring personal protective equipment, machine guards, and designation of operator areas.

2. **Functionality of existing structures and space allocation to program areas served**

   Programs being revised in the next five years include Associate degrees and certificates in **HVAC, Renewable Energy, Transportation, and Mechatronics**. These program improvements require high tech classrooms and laboratories that are supported by a robust technological infrastructure. Replacement value of existing facilities (insured value of structure to the extent available)

   A report provided by R. A. Schettler, Inc., listing the Replacement Value New and the Sound or Depreciated Value of all buildings at HFC (dated 10/2020) and is included in Appendix D. Building age and size data is included in Appendix E.

3. **Utility system condition (i.e., heating, ventilation, and air conditioning (HVAC), water and sewage, electrical, etc.)**

   The current systems provide sufficient heating, cooling, ventilation, and other utilities to meet occupant needs under most operating conditions. However, the Facilities Assessment and Deferred Maintenance Capital Planning Report has identified major issues in life expectancy and potential immediate system failures.

   See [Facilities Assessment & Deferred Maintenance Capital Planning Report 2018](#).

4. **Facility infrastructure condition (i.e., roads, bridges, parking structures, lots, etc.)**

   The College completed the redesign and reconstruction of all parking lots at the
Evergreen site. This includes a new storm water improvement system that significantly benefits the Rouge River, which receives storm water runoff. Additional investment in 2014 through 2021 was made in sealing and preventative maintenance of the parking lots of both the Main and East Campuses. Extensive upgrades and repairs of concrete walkways were made in 2014 through 2021 at both Main and East Campus. Roof replacements were also completed. Included in Appendix G is the listing of building repair priorities.

5. Adequacy of existing utilities and infrastructure systems to current and five-year projected programmatic needs

The electrical system at the Evergreen site includes many components that—after more than forty years of use—have exceeded their useful life. A plan was been developed to replace much of this infrastructure and to convert from 4800-Volt to 13.2 kVA feeders as recommended by the local electricity provider. The electrical project related to the North Loop feeder should be completed by 2023. 90% of the North Feeder loop upgrade to 13.2 KVA was completed with an additional section covering the Facilities Building and Powerhouse. The final phase of the North Loop upgrade includes the Tech Building Feeder and return to the Main Vault. The final phase is budgeted, and design is complete as of summer 2021. The Liberal Arts substation was completely replaced in the previously completed phase.

6. Does the institution have an enterprise-wide energy plan? What are its goals? Have energy audits been completed on all facilities, if not what is the plan/timetable for completing such audits?

There is opportunity for improvement in the area of energy use/efficiency. A subcommittee comprised of facility personnel as well as faculty in the Energy Technology Program was formed to investigate the potential for savings under performance management contracting.

Where appropriate, and as funds become available, energy audits of several buildings are completed when possible to assist in identifying opportunities for future savings.

Also, the College has completed an Integrated Energy Master Plan (IEMP), the comprehensive energy savings plans for the campus. Integrated Energy Mater Plan (IEMP) will define building and system improvements linked to the Colleges Facilities Master Plan.

The Integrated Energy Master Plan (IEMP- Appendix B) launched in June 2017 was completed in March 2018 and is aimed at ensuring the College has world-class energy performance in terms of energy reliability, energy efficiency, greenhouse gas
emissions and energy cost. This is a transformative plan aimed at reducing the energy and emissions footprint of the College by at least 50% to bring it in line with global best practices. The targets for the IEMP were guided by the US, Canadian and European benchmark institutions.

The IEMP creates a detailed integrated technical, environmental and economic model of College’s energy use from end-user through campus distribution and supply with an outlook of about 20 years. Various scenarios of end-use efficiency, smart-campus control and measurement networks, electrical and thermal distribution and on-site clean and renewable supplies are evaluated against different regulatory and cost risk. The Scenario that best meets all the transformative targets will be adopted by the College as the implementation roadmap with year-on-year investments in energy infrastructure and the associated technical and economic performance.

The implementation of the IEMP includes changes in energy management practices and energy-related procurement. The aim is to build in continuous improvement around energy performance. Changes in procurement policies will also ensure new construction (including the major expansion of E building), renovation, retrofits and energy infrastructure meet the highest possible levels of efficiency measured against comparable examples anywhere in the world.

The College’s enterprise-wide energy plan depends largely on the age of the building and the details of their particular heating/cooling systems as follows:

- Construction/renovation to current energy code standards. This applies to the renovated science building (2011) as well as the new addition to the Science Center (2012) and the Welcome Center (2012).
- Retro-commissioning of relatively new buildings with modern controls as funds become available. These include the Heath Careers Education Center (1999) and the M-TEC building (1999).
- Retrofitting of temperature controls for the Administrative Services and Conference Center (1979) as funds become available.
- Major renovation of older buildings including complete renovation of mechanical systems as is being considered for the liberal arts building (1960).
- Renovations of buildings and rooms include the use of low energy LED lighting systems and occupancy sensors.

The main campus central heating and cooling plants are given special attention with regard to energy consumption. The current plant features a 52-year-old central boiler system and a 25-year-old 4.8 KVA chiller. In Spring 2022, the College will switch over to a new central heating plant in the Technology building. The plant features 6 new boilers, a 500-ton chiller, and combined heat-power. The 1960s-era cooling tower was replaced in 2017.
The Facilities Services Staff are dedicated to managing the mechanical systems with an eye to saving energy as much as possible. We retain a building controls firm who provides us with regular services to maintain our Building Management System and assist us with technical support as we improve the system.

The College is currently in the implementation phase of the $23.2 million IEMP project with Johnson Controls Inc. as the lead vendor for the project.

7. **Identify Land owned by the institution, and include a determination of whether capacity exists for future development, additional acquisitions are needed to meet future demands, or surplus land can be conveyed for a different purpose**

Included in Appendix F is a map of the main campus of the College. The southern property line is shared with University of Michigan-Dearborn and the Gabriel Richard Campus Ministry Center. The eastern border flanks Evergreen Road and provides the major vehicular entry points to the campus roadway systems and parking facilities. Immediately east of Evergreen Road is land owned by the Ford Motor Land Development Corporation, the Fairlane Town Center, and Fairlane Meadows. The western facilities boundary is created by the Rouge River watershed, controlled under the jurisdiction of Wayne County. The northern property line is Ford Road (M-153).

Despite these space limitations, it is considered important to protect and preserve as much open space as possible, particularly space adjacent to buildings and building additions.

At this time, it is determined that additional acquisitions are not needed to meet the need of future demands.

8. **What portions of existing buildings, if any, are currently obligated to the State Building Authority and when these State Building Authority leases are set to expire**

   Student and Culinary Arts Center 2028
V. IMPLEMENTATION PLAN

The Five-Year Capital Outlay Plan should identify the schedule by which the institution proposes to address major capital deficiencies, and:

1. Prioritize major capital projects requested from the State, including a brief project description and estimated cost, in the format provided.

Based on the assessments described above, Henry Ford College has established the following projects which are listed in priority order:

a. Technology Building: The Center for Innovative Manufacturing Education (CIMed)
b. IEMP: Integrated Energy Master Plan
c. Southeast Michigan Student Success Center (SEMSSC)
d. Library: Learning Commons

Detailed descriptions of the projects listed above are included in Appendices A-D.

2. If applicable, provide an estimate relative to the institution’s current deferred maintenance backlog. Define the impact of addressing deferred maintenance and structural repairs, including programmatic impact, immediately versus over the next five years.

The 2014-2015 (Updated in 2018) Facilities Assessment and Deferred Maintenance Capital Planning Report includes facilities issues according to their impact on health and safety, accessibility, code compliance, potential for stopping further deterioration of facilities, and impact on the learning environment.

Due to the current state of the infrastructure failings, the College continues to budget as much as possible to address these issues on an annual basis.

The findings of the Technology Building analysis include:

- IEMP contract provided updates to the HVAC equipment and controls, plumbing fixtures, lighting and lighting controls.

- HVAC: AHU being refurbished with new supply fan array, coils being pressure tested, damper actuators replaced, damped refurbished or replaced, and cabinets repaired. Mixing boxes being upgraded to digital control, but equipment remains a constant volume, dual duct system.

- HVAC: 1993 addition RTUs 1, 2, 3 are not structurally sound and should be replaced.

- HVAC: insufficient heat in winter issue resolved through improved controls and pump upgrades.
• Plumbing: Restroom fixtures upgraded to low flow type. Accessibility not addressed as part of IEMP.

• Lighting: As part of IEMP, light fixtures re-lamped or replaced with LED units and lighting were upgraded to motion sensor.

• Roof: Significant portions of the roof are being replaced as part of the renovation.

• Floor: 1964 wing corridor floors are being replaced as part of renovation.

• Ceiling: 1964 wing ceilings are being replaced as part of the renovation.

• Electrical: The substation is outdated and due for replacement with 13.2 kV system once north campus primary loop is extended to the building. Plan to upgrade in 2021 delayed due to high cost. This building is the last remaining building on original 4,800-volt primary.

• Signage: Interior signage planned to be updated/replaced to address new building naming system. Egress maps updated to address new building naming system.

• ADA: Door hardware not being upgrade as part of renovation. Many doors remain with old style knob hardware.

Facility Condition Index – Building E. 2021.

The findings of the Eshleman Library analysis include:

• IEMP contract provided updates to the HVAC equipment and controls, plumbing fixtures, lighting and lighting controls.

• Signage: Interior signage planned to be updated/replaced to address new building naming system. Egress maps updated to address new building naming system.
• Plumbing: Restroom fixtures upgraded to low flow type. Accessibility not
addressed as part of IEMP.
• Lighting: As part of IEMP, light fixtures re-lamped or replaced with LED units
and lighting controls were upgraded to motion sensor.
• Floors: Older carpet replaced as needed.
• Roof: Skylights reported as needing resealing to prevent leaks
• Fire alarm: Panel original and reported nearing end of useful service life.

Facility Condition Index – Building B. 2021.

3. Include the status of on-going projects financed with State Building Authority
resources and explain how completion coincides with the overall Five-Year
Capital Outlay Plan

There are no current projects financed with State Building Authority resources. The
College has been authorized by the State to initiate the design phase for the
Technology Building.

4. Identify to the extent possible, a rate of return on planned expenditures. This
could be expressed as operational “savings” that a planned capital expenditure
would yield in future years.

Studies indicate that campus facilities and appearance are among the top reasons
for students choosing a college. Therefore, modern and attractive facilities and
classrooms will have significant impact on recruitment and retention. The
experience and education students will receive will positively benefit local, state,
national, and global employers as demonstrated by the Economic Modeling
Specialist Data. The highly skilled workforce will contribute to the economic
development of the areas in which the students become employed. With the
completion of the Integrated Energy Master Plan (IEMP), any modification and
upgrades have been benchmarked to yield an ROI of 7%.
5. Where applicable, consider alternatives to new infrastructure, such as distance learning

The distance learning program at HFC is being reviewed vis-à-vis the long-range strategic goals of the college. The Board of Trustees is allocating resources for research, personnel and ultimately development of the Online at HFC College. In essence, the College is developing and implementing a brand new, sustainable, quality first, structure and model focused on student success. To achieve this, a new structure will be established, quality standards will be guaranteed prior to publication, evaluations will be regularly conducted, student learning will be easily evaluated, student services will be embedded, and sustainability measures will be set. However, the growth of distance education programs will not reduce the physical space needs of the face-to-face delivery of instruction at HFC.

6. Identify a maintenance schedule for major maintenance items in excess of $1,000,000 for fiscal year 2021 through fiscal year 2025.

There are no major maintenance items in excess of $1,000,000 planned other than the IEMP project for improving the College energy usage by 60%.

7. Identify the amount of non-routine maintenance the institution has budgeted for in its current fiscal year and relevant sources of financing.

For 2021-22 the College has budgeted from operations approximately $1,000,000 for non-routine maintenance.

Upgraded Colleges WIFI network and Groupwise E-mail system were funded through the Colleges Technology Fee in fiscal 2019.

Upgrade to the SME south building for provided added space for Dual Enrollment. (Rental to be changed to Dearborn Public Schools to recoup costs of renovation.) This process won’t take effect until FY 2023.
Technology Building: The Center for Innovative Manufacturing Education (CIMed)

Excerpt from the HFC National Science Foundation Grant Application, October 2015:

Critical Issues Facing Education for Advanced Manufacturing Worker Development

A study of student workforce readiness conducted by the Lumina Foundation found that 96% of college academic officers felt that students were prepared for the workforce upon graduation, while only 11% of business leaders agreed (Lumina, 2015). Also highlighted by Baumann et.al (2014), there is a gap between the skills students acquire and the skills employers need them to have. This is particularly evident in the U.S. manufacturing sector where the skills gap continues to grow, not because of worker shortages, but because educational competencies are not aligned with those needed in the workplace.

Open-Lab Platform

“Traditional educational models are not designed to serve the population most needing postsecondary education. We keep trying to wedge nontraditional students into inflexible educational structures that were built for 18 to 22 year olds and have barely changed in almost a millennium.” (Browser, 2014) The implementation of Common–Performance Based Objectives through the Open Lab Platform (OLP) will allow Competency Based Education to reach full potential by addressing “accessibility, affordability, transparency, and improved learning outcomes - all relevant to graduates’ employability and strengthening of the workforce” (Book, 2014). The OLP will build upon best practices and lessons learned from other institutions. This is critical, because research on improving CBE’s effectiveness indicates it must be supported by other innovations in design, delivery and assessment including:

- Student centered learning, in terms of flexibility and personalization (Klein-Collins, 2013).
- The ability for students to study at a variable, customized pace and receive consistent faculty support (Johnstone and Soares, 2014).
- (Create) sustainable learning resources, available at any time (Johnstone and Soares, 2014)
- Redefine(ing) the role of faculty since their role will change and insuring faculty develop CBE expertise (Mendenhall, 2012) (Cavanaugh, 2013) (Le, Wolfe, and Steinberg, 2014)
- (Create)Valid, reliable assessments (Mendenhall, 2012)
- Modularized learning (Weise, 2014)
The platform has additional economic benefits for all stakeholders that include maximizing instructional space for teaching and learning and optimizing hands-on technological equipment so students can access appropriate equipment. By encouraging students to embrace a more self-directed approach, they will increase their success in mastering a skill and attaining credentials.
APPENDIX B

Integrated Energy Master Plan (IEMP) and Energy Learning Center (ELC)

Henry Ford College – Bringing World Class Energy Education to Michigan

The energy outlook in Michigan, the USA and beyond, presents major opportunities for Henry Ford College. Worldwide energy use continues to grow and change. There is pressure to reduce carbon emissions from energy use to limit the effects of climate change. Closer to home, Michigan’s energy and water systems are being upgraded to improve flexibility and reliability and reduce environmental damage. Technology is enabling cleaner, cheaper and more efficient energy and water use and supply choices. These factors are combining to drive a transformation the global energy market.

Senior leadership in industry, commerce, major institutions and communities increasingly understand the scale of both the opportunities and risks associated with energy use. This is increasing the need to develop complete energy solutions that deliver breakthrough levels of efficiency, reliability, flexibility, and environmental performance at lower day-to-day costs and overall economic risk. The result is a rapidly growing demand for new skills in tomorrow’s workforce at all levels.

This global picture was the backdrop to decision by the leadership of Henry Ford College leadership to develop an Integrated Energy Master Plan (IEMP) to create academic opportunities to serve the changing energy market and to slash the College’s own use of energy and water for the coming decades.

In 2017, the College spent $1.5M on electricity, natural gas, creating a carbon footprint of 10,800 metric tons; roughly equivalent to the emissions from 3,000 cars. Under a business-as-usual scenario combining anticipated expansion and price uncertainties, utility cost could increase to between $3.4M and $4.7M by 2039. The carbon footprint stays about the same when climate science and international agreements call for up to 70% reductions.

The College Leadership set the challenge to create an energy plan that would represent global best practices in both its energy education and its own energy performance. After a year of effort, the IEMP was completed and favourably reviewed by the College’s Board of Trustees in May 2018.

The IEMP is a 20-year roadmap to 2039 for the College to raise its energy efficiency by 60%, its water efficiency by 40%, improve energy reliability, and cut absolute greenhouse gas emissions by over 60%, while achieving acceptable investment returns. It will also create a range of new energy-oriented academic and community outreach programmes.

These results are achieved by comprehensive investments in control and metering, efficiency, restructured energy supply and distribution, along with changes in the energy management processes, practices and engagement. The College will build a pervasive Energy and Climate Culture shared by all staff, students and stakeholders. This will create a world-class “Living Classroom” upon which the College will extend it academic offering.

The College’s entire energy and water metering, and control capability will be upgraded to create a Smart City Network, supporting efficient day-to-day operations, long-term continuous improvement, performance reporting and campus-wide engagement. All buildings will have comprehensive energy efficiency retrofits.

The 60-year old heating network will be replaced with one that meets current global municipal standards and will be extended to all buildings. This will be a relatively rare US example of a global best practice district energy network and be a valuable teaching and community asset.

A new Energy Learning Center will be incorporated as a part of the refurbishment of the Tech Building. The Center will supply competitive, clean, and reliable energy from efficient sources, including high-efficiency boilers and chillers, thermal storage, combined heat and power (CHP) generation, along with significant solar power generation. The Energy Center will be both a modern operational facility and be configured as a teaching facility. It will be designed as a visible statement of the College’s energy leadership.

The IEMP technical solution combines latest, proven technologies into a world-class flexible configuration that can evolve with ongoing changes over the coming decades. It creates a small-scale example of an energy and carbon-efficient Smart Community. Some aspects of the solution are more common in other parts of the world than in the
USA and Canada. This gives the College the opportunity to not only serve the education needs of a transforming US and Canadian market, but also team with global players looking to expand their North American activities. The College is already in discussion with US and European leaders to form these alliances.

The technical solution calls for total investments of approximately $23M between 2019 and 2022. About $15M represents acceleration, redirection and completion of anticipated deferred maintenance and ongoing facility programmes. The remaining $8M is the incremental investment needed to deliver breakthrough energy performance. Based on a conservative view of future energy prices the IEMP will be in positive cash flow by 2029 and deliver 7% IRR on incremental investments.

![Cashflow - Recommended Solution - Henry Ford College IEMP - Main - East](chart)

Anticipated additional academic revenues from new energy related programmes enhance the returns.

The IEMP also calls for organization changes. These include a restructured facilities team supported by Senior Sponsors. An IEMP Steering Committee will be formed including senior representatives from neighbouring industry, government and community interests. A newly formed student group “Sustainable HFC” has a key role in engaging the entire College population.

The IEMP areas of academic focus include realigned workforce training, technical certification, post-bachelor certificates and a possible new bachelor’s degree program. The College will also be positioned as destination for elementary and high-school students in Dearborn, greater Detroit and Windsor, Ontario as a resource for raising energy and climate awareness, new career paths and engaging future College students.

Implementing the Henry Ford College Integrated Energy Master Plan recommendation will transform the College’s ability to serve rapidly evolving educational needs while eliminating waste and freeing up resources for more productive use. It will set the College on the pathway to become a recognized US Center of Excellence for energy education.
Southeast Michigan Student Success Center

Michigan ranks in the bottom third of states’ percentage of citizens with a post-secondary credential. To achieve the state-wide goal of reaching 60% of citizens with a post-secondary credential (certificate or diploma), the higher-education system must increase its success outcomes. The college pipeline has leaks that must be stopped: only 53% of new college students from Southeast Michigan graduate. And the graduation rate for new college students from Detroit is 24%. It is not possible to achieve this attainment goal of 60% by simply sending more students through the system, because Michigan will have declining high school graduates until 2035, at the earliest.

A regional solution is required to help increase graduation rates and achieve the state’s goal of 60% college attainment by 2030. The Southeast Michigan Student Success Center will be the region’s solution to this problem. The SEMSSC will serve as a physical convening location for all the region’s student-success initiatives. The SEMSSC will be open to any regional student-success organization. Examples include entities beyond the education landscape: the Detroit Regional Chamber, the Kresge Foundation and the Ralph C. Wilson Jr. Foundation. The SEMSSC will host quarterly gathers of up to 200 of the regions leaders in industry, higher education, government, P-12 school districts, and philanthropy to discuss and collaborate best practices on raising the percentage of college attainment. Best practices will grow from, and be implemented at, Henry Ford College and other higher-education partners. Examples of student-success initiatives that this center will provide and scale include:

- Innovative class scheduling to fit students who are working adults
- On-site childcare for students with children
- Co-curricular classes, so students can simultaneously take remedial coursework with for-credit coursework
- Microgrants targeted at meeting unexpected financial needs during a semester for at-risk students
- Intrusive advising for first-generation college students to have an academic coach support and monitor them weekly

Each of these strategies have worked to raise graduation rates in other regions of the country. They have also successfully reduced, and sometimes eliminated, the gap between students of color and white students. The SEMSSC will be the region’s flag in the ground to raise student success and achieve the state’s goal of 60% college attainment by 2030.

Library: Learning Commons

The renovation of the existing library (83,000 GSF) into the Learning Commons is being
proposed to achieve the following goals:

- Promoting student collaboration.
- Creating a hub for outside-the-classroom learning.
- Reimagining the library as the knowledge center.
- Bringing together and aligning academic support services and programs from across the campus into a one-stop center.
- Preparing for Early College expansion.
- Providing state-of-the-art technology enhanced Smart Classrooms.

Outcomes
Renovation of 83,000 GSF to create

- Establishing a Learning Commons
- Relocating Bookstore to Learning Commons.
- Incorporating several technology-enhanced Smart Classrooms as well as an Information Literacy Computer Lab
- Reallocating floor space for quiet and collaborative study, distributing computers throughout the building.
- Aligning all Academic Support Programs into one building.
- Learning Commons to house student services such as Veterans Affairs, Honors, Study Abroad, Service Learning, Civic Engagement, Assisted Learning, Outreach, and Counseling.
